COVER

Design by Raymond Geary highlights discussions of kidney transplantation.

OPPOSITE

Patient who has received a kidney homotransplant is undergoing radiation therapy of the kidney to suppress his immune response. X-ray is being delivered by a 2-million volt "Maxitron 2000". The Medical College of Virginia acquired the unit in 1961, through the efforts of the Federation of Women's Clubs of Virginia, the American Cancer Society, the M. C. V. Endowment Fund, and other contributors. The Maxitron is also used for therapy of malignant disease.
