This Event is brought to you for free and open access by the Dept. of Mathematics and Applied Mathematics at VCU Scholars Compass. It has been accepted for inclusion in Biology and Medicine Through Mathematics Conference by an authorized administrator of VCU Scholars Compass. For more information, please contact libcompass@vcu.edu.

Exploring Population Dynamics of Soft-Bodied Ticks

Ticks are a notorious arthropod vector of disease to human and livestock. There are two major types of ticks: hard-bodied ticks and soft-bodied ticks. While many models have been created to explore the dynamics of hard-bodied ticks, almost none have been developed for soft-bodied tick. We present the initial efforts to identify the dynamics of soft-bodied ticks and develop a simple life table model.
