

Joseph H. Holmes (*Diagnostic Ultrasonography*) is professor of medicine and head of the division of renal diseases at the University of Colorado School of Medicine. After a residency in internal medicine, he completed eight years of postgraduate study in physiology at Columbia University, which culminated in a D.Med.Sci. degree. He came to Colorado in 1947 and has worked in areas of clinical pathology, renal disease, medical and paramedical teaching. Research interests include thirst and fluid balance, pesticide toxicity, and diagnostic ultrasound.

George E. Miller (*Continuing Education for What?*) has been associated with the University of Illinois College of Medicine for the past eight years as Director of its Office of Research in Medical Education. He also serves the College as professor of medicine and is the author of numerous publications on medical education and training. A native of Swarthmore, Pennsylvania, he received his M.D. from the University of Pennsylvania and did his clinical training in internal medicine at Buffalo General Hospital. Before going to Chicago, Dr. Miller spent several years on the medical faculty of the State U. of N. Y. at Buffalo.

Robert W. Miller (*Origins of Congenital Defects: Epidemiologic Approach*) is chief of the Epidemiology Branch of the National Cancer Institute, the National Institutes of Health. He received his B.A. and M.D. from the University of Pennsylvania and took his residency in pediatrics at Buffalo Children's Hospital. Following a post-doctoral fellowship in radiation medicine at Western Reserve and Duke Universities, he was a captain in the U. S. Army assigned to the University of Rochester Atomic Energy Project. Later, as chief pediatrician for the Atomic Bomb Casualty Commission in Japan, he studied the effects of inbreeding on child health. In 1961 he received a Dr. P.H. in epidemiology from the University of Michigan School of Public Health.

Charles O. Watlington (*Adrenergic Stimulation and Sodium Transport*), assistant professor of medicine at the Medical College of Virginia, received his B.S. from Virginia Polytechnic Institute and his M.D. from MCV. After three years at the University of California at San Francisco as an intern, NIH trainee, and assistant resident, he returned to MCV for a year of residency and three years of post-graduate work. As the holder of an NIH Special Fellowship, Dr. Watlington has been conducting research on neuroendocrine control of ion transport.
