I believe

in the simplicity of design. Beautiful architecture is a result of a quiet simplicity. The power of the architecture lies in the simple elements it is made up of - lines, planes, voids and masses.

in the beauty of the process. I have uncovered the wonder in the design process. There is growth to be found in everyday actions, in the repetitive motions.

in the healing power of design. There is a link between our consciousness and the built environments that we occupy. How we experience these environments affects us mentally, physically, and emotionally. Therefore, as a designer, I have the ability (and responsibility) to design and affect the consciousness of all who occupy these environments.

manifesto
introduction

Today, more than ever, there exists an overlap between hospitality and healthcare industries; with the impact being felt in the way hospital interiors are designed. This influence impacts the patient’s experience but focuses very little on the experience of the caregiver. Caring for a sick child takes an emotional, mental, and physical toll on a family (Gulwadi, 2009). It is especially challenging to care for a sick family member when away from the comfort and security of the family’s private home. This project explores that challenge through the interior design of a space that, for both patient and family, is restorative, healing, and encouraging. It is a space that assists a family in caring for their loved one.

The VCU Medical System continues to expand. With this comes an even greater need to provide a place of healing for families to stay while their children/siblings are in long-term care. From 2010 to 2012 Children’s Hospital of Richmond at VCU increased its pediatric specialist by 20 percent. In 2010 VCU opened a new pediatric emergency room opened, the only one in Central Virginia to offer 24-hour access to all pediatric specialists (Children’s Hospital of Richmond, 2015). As of March 2016 the newly renovated 640,000 square foot Children’s Pavilion opened its doors.

Creating the optimal environment for emotional and mental healing has its challenges. A multi-prong approach is needed; one where psychology and design work together to create an optimal space of healing. Precedents such as the Ronald McDonald House of Richmond and British Columbia, support what is needed in terms of psychological support. A literature review of healing spaces, the merging of healthcare and hospitality architecture and design, caregiving psychological and emotional needs, and facilities in urban environments, will establish what is needed in order to provide a space where caregivers are permitted to heal.

statistics

% of U.S. adult population providing care to someone who is ill, disabled or aged

symptoms of psychological distress + health consequences where the child is the primary care receiver
“architecture is bound to a certain situation. and i feel like the site is a metaphysical link, a poetic link, to what a building can be.”

stephen holl
The Medical College of Virginia has steep ties to the Richmond area. Founded in 1838 as the Medical Department of Hampden-Sydney College, 46 students enrolled in the first class lasting from November 5, 1838 – April 4, 1839. Students paid $20 to the professors for each of the six courses (VCU Medical Center, 2015). Since then VCU / MCV has become a leading educational institution.

VCU has expanded its research programs significantly over the past decade and has over $255 million in sponsored research (VCU Medical Center, 2015). The medical campus is situated on the edge of the downtown area and Shockoe Bottom. Downtown Richmond is host to government agencies, numerous businesses, including several Fortune 500 companies such as Dominion Resources, MothWestvaco and Universal. There are a plentiful amount of restaurants, bars and nightclubs, in addition to housing for VCU.

The grand state capital, in its classical revival architectural style, is situated directly across from medical campus. Down the hill, continuing along Broad Street, is Shockoe Bottom. Shockoe Bottom has recently benefited from urban renewal and now features farmers markets, various housing options and restaurants.
The VCU West Hospital was commissioned by the Public Works Administration in 1941 for $2.5 million (In the Tradition of MCV, 2015). Initially the hospital housed 600 beds and served as a beacon for the MCV medical community. Cruciform in shape, the building distinguishes itself from the others surrounding and rather any building in downtown Richmond. It serves as an abutment between the MCV campus and the plunge downhill to Shockoe Bottom. The rich red brick exterior dominates, however carefully placed decorative touches add greater appeal. The Art Deco inspired bronze entrance door grills feature scenes from major milestones in medical history. Surrounding the doorways is a soft sandstone.

The building currently houses various clinical, administrative and support services of the VCU Medical Center.

“It’s not the beauty of the building you should look at; it’s the construction of the foundation that will stand the test of time.”

david allen coe
The building is comprised of 18 floors, totaling approximately 300,000 square feet (gross), however this program utilizes only floors 14 through 16, approximately 48,000 square feet (gross). With windows that run along the perimeter of the building, facing all directions, those upper floors not only offer spectacular views, but are conducive to a program that focuses on natural light.

**Notes:**
- **A3** indicates an area of 300 square feet.
- **R2** indicates a room that serves multiple purposes and can accommodate up to 2 people.
- **R** indicates a room that serves multiple purposes and can accommodate up to 1 person.
- **B** indicates a room that serves a specific purpose and is for the use of staff only.
- **SQ FT. Per Person (net)** refers to the net square footage per person in the space.
- **Max Occupant Load** refers to the maximum number of people that can be accommodated in the space.
- **Total Area (SQ FT)** refers to the total square footage of the space.
- **Occupancy Type** indicates the type of occupancy for the space.
### Patient Profile

**Parent(s) of Patient**
- Whether as a couple, single parent or a parent traveling without spouse

**Sibling(s) of Patient**
- Range in age but most likely under 18

**Patient**
- Child receiving treatment through the VCU medical system (occasional visit)

### General Staff
- Front desk, housekeeping, culinary, etc.

### Instructors
- Yoga, general exercise, mindfulness, etc.

### Specialized Medical Staff
- Psychologist, dietitian, etc.

### Adjacency Matrix

Important adjacencies are considered in order to make space plan decisions. These adjacencies analyze how to use proximity to create emphasis, as well as consider visual, acoustical and physical privacy.

This matrix shows the importance of privacy in the advising/support areas, as well as guest rooms and other quieter spaces such as yoga and the reflection space. Important adjacencies such as the proximity of the guest rooms to community spaces is shown.

“whatever great things we build, end up building us.”

Jim Rohn
“Architecture and art do not themselves save cancer patients, but they can amplify and ethos of an institution in a positive direction” (Domus, 2015). These are the wise words of Charles Jencks. His wife, Maggie Keswick Jencks, died of breast cancer in 1995. Before she died, Maggie and Charles founded Maggie’s Centre; an information and support center for those living with cancer and their care-givers. Located in various cities throughout the UK, Maggie’s Centres are a place to meet experts, consult the internet and libraries or attend group therapy. Maggie’s Centres are typically located adjacent to a hospital and within an urban context. The West London Maggie’s Centre is directly adjacent to the Charing Cross Hospital, for example. The centre’s interior and exterior counter-balance the cold, austere architecture of the nearby hospital by using the concept of a welcoming home to drive the design.

The exterior of the West London centre is painted a bright brick red. The kitchen is the heart of the building with a long table for cancer patients and loved ones to share their experiences. The roof is a metal slab perforated by wide skylights which allow natural light to penetrate into the heart of the building, its inner paths and communal spaces (Domus, 2015). Sunlight is a welcome relief to the harsh fluorescent lighting of the hospital. There is a strong indoor/outdoor connection via various courtyards throughout the space.

This precedent illustrates the importance that design, specifically as it relates to natural light, has on physical, emotional and mental well being of those under stressful circumstances. Connection to those around you, as well as to place, is established through the design.

The Ronald McDonald House serves as a place to stay for families with hospitalized children who are receiving treatment. Guests are encouraged to make a nominal nightly donation, however no family is ever turned away for inability to pay. Currently there are 322 Ronald McDonald’s Houses in 57 countries and regions (Ronald McDonald House Charities, 2015). Situated on historic Monument Avenue, in the heart of Richmond, is the city’s Ronald McDonald House. The basement level features a play space/den, staff office, and laundry room. Reception, living space and an expansive kitchen are on the main level. 5 bedrooms with shared bathrooms occupy the 2nd level. The 3rd level features a small common area. The average stay is 14 days, with some staying as short as one night, others 6 to 8 weeks, and some as long as one year. Families must be referred by the hospital in order to stay at the home.

As Executive Director of RMC Richmond, Kerry Blumberg, adds “the hospitals are our care partners, working together to provide the best possible care for the patient and their family” (personal interview). The highly rated MCV/VCU medical system not only means many east coast region families to the Richmond House, but also international families.

The House offers various programs to bring families together such as birthday celebrations, pet therapy, movie night, board games, and arts and crafts. There are no televisions in the individual guest rooms. Connection is an important component of the House program. The House plays an important role in establishing the program of Nest. Understanding of the profile and needs of those families who stay in the Richmond Ronald McDonald House is paramount.
Similar in program to the Ronald McDonald House of Richmond, the Ronald McDonald House of British Columbia boasts a lot more additions not only in rooms, but in amenities as well. Able to accommodate up to 73 families, the house is one of the top 10 Ronald McDonald Houses in the world in terms of size. “It’s on the world stage for the uniqueness of its construction, the uniqueness of its function and the amenities to families” said Richard Pass, Ronald McDonald House chief executive officer (Zacharias, 2015).

While the previous house was not near the hospital, the new home is located on the grounds of the British Columbia Children’s Hospital. Families were interviewed during the initial process of finding an alternate location and the top priority was proximity to the hospital. This provides an easier opportunity for families to rest when able.

The house is divided into four pavilions (Forest, Beach, Mountain and River) with adjoining common spaces. Each pavilion has a shared professionally equipped kitchen for individual families to make meals. There are also two dining rooms to encourage families to interact with one another.

The healing power of play is stressed in various areas of the house; one being a slide from the second to first floor. An arts and crafts room is featured as well. An indoor fitness center reminds parents of the importance to be active, especially during stressful times. Secure Wi-fi zones and computer stations are stationed throughout the house.

The Ronald McDonald House of British Columbia serves as an important precedent as it relates to the program of Nest. Amenities such as shared kitchens on guest room floors, arts and crafts space, indoor fitness center and Wi-fi zones will all be important features in Nest.

**wants, needs + desires**

**users**
- seeks social interaction with others experiencing similar feelings
- needs to take time for self reflection
- wants to feel that the space is a refuge
- has the desire to have control over their environment
- desires to be nourished - mind, heart, body and soul
- wishes to be in a restorative environment

**building**
- to provide light and warmth to its occupants through its expansive stretches of windows
- desires to be connected to the medical buildings surrounding
- desires to be a prominent fixture on broad street
- brick exterior desires to communicate strength and support
- cruciform shape communicates a central axis
- the interior of the building desires to come alive, to be open + accessible
- wants to showcase its spectacular views of the urban and natural landscape

**program**
- desires to embrace connection + community
- should have flexible spaces
- should provide creative outlets for users
- should promote healing in more ways than one
- should inspire play
- should promote movement
- should promote tranquility

**designer**
- seeks to create healing spaces
- seeks to utilize a variety of materials with various textures
- seeks to create a haven for users
- seeks to provide spaces that encourage connection among users
- seeks to embrace the central axis of the building
- seeks to experiment with expand and contract
- seeks to create a space that invites ownership by the user

Initially the program was intended to occupy only 2 floors - 14 and 16. Certain spaces were intended to be double height - the guest rooms, dining space, and main lobby (reception). While the dining space ultimately remained two story, the guest rooms and main lobby needed to provide a more intimate feel, thus both spaces became one story.

All guest rooms then were then able to occupy only the north and south wing of the 3 floors - 14, 15, 16 - with community kitchens at the end of each hallway. This also permitted the reflection space (chapel) to become a two story light-filled space on the 15th and 16th floor.

The kitchen and restrooms moved to the center of the west wing with seating circling around. This allowed for as much light as possible to fill one of the main connection spaces. The glass-walled exercise room was stacked on top of the kitchen to allow connection to those below. Above the exercise room moved yoga and all counseling rooms, creating an entire wellness wing.
“architecture is the learned game, correct and magnificent, of forms assembled in the light.”

—Le Corbusier
this project celebrates the strength of the collective. how one comes together to form many. it explores how the individual and the whole are separate and yet how they play together: the space reflects a consideration for the flexibility and control that is needed by the individual components of the project – the users, the building, the site, the program – and how ultimately by providing a balance between both flexibility and control, ideal support of the collective is achieved: this is done through a consideration for repetition, scale and exposure.

The main lobby serves as guest check-in, as well as a gathering spot before departing for the day, or heading out in the evening with fellow Nest families. Guests are greeted with warm wood accents, comfortable furniture showcasing bold colors and patterns. A large shelving wall houses plants and books, as well as small momentos that individuals leave behind as an offer of support of others. It serves as a place of connection and collection.

- Image 3: Enlarged plan of the main lobby area.
Perched on the 14th floor of the building, the Eating and Gathering Hall serves as a place for enjoying a family meal or a quick snack with that friend made during yoga. It is a social zone that encourages connection with other families through community tables, as well as lounge style seating on both the first and second story. With windows running two stories along the perimeter of the space, both the urban and natural views of the surrounding area can be enjoyed at almost any point. Additionally, the flood of natural light offers a welcome relief from the stark fluorescent lighting of the nearby hospital. Guests are encouraged to place photos of their loved one residing in the hospital on the entrance wall.
The Reflection Space is that of quiet contemplation. It is a place to offer a prayer, or a hope, for your loved one in the hospital. It is a place to be still. It is a place to be alone with your thoughts and feelings.

The guest is initially greeted by rich walnut wood slats on the exterior of both the east and west side. Soft cove lighting above the wood slats guides the guest towards the main entrance doors. Approaching the glass doors you are able to discern wood slats on the interior that are slightly spaced to absorb light from the two story atrium, as well as provide light to the atrium from the perimeter windows. Once inside, you discover the custom red and blue glass lighting feature situated between floors. Guests are then able to decide which of the four circular “pods” to sit and reflect in. They may be alone or with company.
Community Kitchens are located on the 15th floor of both the north and south side of the building. The Community Kitchen is a space for individuals and families to prepare meals together. It is a space to share stories, along with recipes. A community lounge on both the 14th and 16th floors, connects to the Community Kitchens via a central stairwell. The lounge space offers comfortable seating and dining tables.

The Standard Guest Rooms feature warm wood accents in the form of a solid oak wood bed and dresser. Pops of color come into play on the blue-stripe accent wall, as well as the classic red Eero Saarinen Womb Chair. Shadow boxes offer an opportunity for guests to place family photos or drawings made in Nests’ Arts and Crafts space.
The Suites offer a bit more space for larger families or those staying for an extended period of time. In addition to the king bedroom, a bunk room offers playful sleeping quarters for children. The Suite features a kitchenette with full size refrigerator, stove, as well as disher and sink. Shadow boxes adorn the living room walls.
